

WHAT IS CLAIMED IS:

1. A cigarette filter, comprising: filter sections including filter materials individually wrapped with plug wrap paper; forming paper for wrapping the filter sections integrally; and tipping paper covering the forming paper so as to connect the filter sections to a cigarette section to form a cigarette,

wherein activated charcoal and an inorganic mineral-based porous material carrying ferrous sulfate/L-ascorbic acid are contained as adsorbents in at least one of the filter materials and a space between the filter materials.

2. The cigarette filter according to claim 1, wherein the plug wrap paper or the forming paper contains the activated charcoal and the inorganic mineral-based porous material carrying ferrous sulfate/L-ascorbic acid as the adsorbents.

3. The cigarette filter according to claim 1, wherein two filter materials are provided, and a mixture of the activated charcoal and the inorganic mineral-based porous material carrying ferrous sulfate/L-ascorbic acid is loaded in the space between the two filter materials.

4. The cigarette filter according to claim 1, wherein two filter materials are provided, and a mixture of the activated charcoal and the inorganic

mineral-based porous material carrying ferrous sulfate/L-ascorbic acid is dispersed in one of the filter materials.

5 5. The cigarette filter according to claim 1, wherein three filter materials are provided, and the activated charcoal and the inorganic mineral-based porous material carrying ferrous sulfate/L-ascorbic acid are individually loaded in the two spaces between the three filter materials.

10 6. The cigarette filter according to claim 1, wherein three filter materials are provided, and the activated charcoal is dispersed in one filter material and the inorganic mineral-based porous material carrying ferrous sulfate/L-ascorbic acid is dispersed
15 in another filter material.

 7. The cigarette filter according to claim 1, wherein silica/alumina is also contained as an adsorbent in addition to the activated charcoal and the inorganic mineral-based porous material carrying
20 ferrous sulfate/L-ascorbic acid.

 8. A cigarette filter, comprising a cigarette holder body including filter materials arranged therein, wherein activated charcoal and an inorganic mineral-based porous material carrying ferrous
25 sulfate/L-ascorbic acid are contained as adsorbents in at least one of the filter materials and a space between the filter materials.
